

Rizwan Muzammal

Full Stack Computer Vision Developer

Professional Summary

With a 100% client success rate across 6+ industries, I have helped businesses detect critical visual details that human inspection may miss, automate processes beyond manual scalability, and deploy robust real-world-ready systems that perform reliably outside laboratory conditions. Possesses strong expertise in programming, image processing, and machine learning. Reduced inference time by 42% through optimized neural network design. Skilled in object detection, segmentation, tracking, and end-to-end computer vision system development.

Employment History

Data Science Intern | **DEV Valley Software House**

2022 – 2023

- Built end-to-end machine learning models for predictive analytics and business intelligence.
- Conducted comprehensive model evaluation to ensure accuracy and reliability metrics.
- Deployed and integrated ML pipelines into production environments for operational use.
- Optimized model performance for real-time inference requirements.

Computer Vision Intern | **AR Lab @ NUST** | Islamabad

4 Months

- Developed and optimized deep learning models for real-time computer vision applications.
- Participated in deployment of production-ready vision models with performance monitoring.
- Contributed to the SafeRail research project as data labeler/annotator for railway safety applications.
- Created high-quality labeled datasets supporting computer vision research initiatives.

Computer Vision Developer | **Dale and Company** | Remote

Aug 2025 – Apr 2026

- Developed and deployed end-to-end computer vision pipelines for production environments.
- Designed and optimized deep learning models for real-time inference at scale.
- Collaborated with cross-functional teams to integrate vision systems into client workflows.
- Maintained model performance monitoring and iterative improvement cycles.

Data Labeler | **Aeyron** | Remote

Jun 2025 – Present

- Annotating and labeling large-scale datasets for computer vision model training.
- Ensuring high-quality, consistent labels across image and video datasets.
- Collaborating with ML engineers to define labeling guidelines and quality benchmarks.
- Contributing to model improvement cycles through iterative data refinement.

Technical Skills

Python, Machine Learning, Deep Learning
Computer Vision, Image Classification
Regression, LLM Fine-Tuning
Object Detection & Tracking
Instance Segmentation
Keypoint Detection, Facial Recognition
Image Processing

Flask API, Docker, AWS EC2
Google AI, Git & GitHub, CI/CD
Label Studio, Data Annotation
TensorFlow, PyTorch, TF Lite
OpenCV, Roboflow Supervision
Hugging Face, Label Studio
YOLOv8, YOLO-NAS

Education

B.Sc. in Statistics Punjab University *2021–2025*
